Shwe (plum seed high-power Charcoal)

About 80% of households use charcoal and other forest fuels every day. Since charcoal and forest fuel pellets are only 12% used, urban households spend an average of 2 cubic tons of firewood per year for daily cooking, while a rural household spends an average of 2.5 tons of firewood per year, causing a lot of forest noise.

By being able to use wood substitute fuel, the country's precious treasures, such as forest resources, can be preserved for long-term sustainability.

Shwe, Plum Seed High-Power Charcoal was discarded from Salay Township Region of Magway .

1. Mainly using Plum seed sides
2. Cassava powder
3. Using plum seeds, wood replacement fuel capsules are produced.
4. Being gold from garbage because it uses locally produced waste raw materials
5. Gaining domestic and foreign interest as a local product
6. No smoke emission
7. Being able to issue as much as the market demands at a low price
8. Not only can we prevent deforestation, but also protect the environment from ecological degradation
9. Earning tax money for the state

Carbon Activated (Cocunut Shell)

Shwe Myo Chit Company only uses pure organic coconut shells. Produced ash and other particles It is of pure quality to use, free of fibers.

We are produced and distributed for sale to water purifiers, air purifiers, waste-water treatment plants and gold mining industries.

Shwe Khine Myae
(high-grade Iodine Salt)

In many countries, iodine is added to salt to avoid the problem of iodine deficiency, and efforts are being made to prevent the problem of iodine deficiency.

Our products purchase raw material form Local area of Mon State(Pa Nga), Rakhine State and Irrawaddy regions

1. Production without changing color, smell, and taste
2. Clean and repackaged with rich iodine
3. Can be used as normal salt
4. healthy and strong Intended for high intelligence, it is systematically produced according to the standards of the Ministry of Food and Health.

Shwe Khine Myae, Iodized Salt is exported and sold nationwide in two forms, not only with domestic raw materials, but also as special refined salt with raw materials imported from Thailand.

Pwint Thit Shwe (Kachin Traditional Ale)

According to ethnic tradition, being treated with khao juice shows affection and hospitality. Consuming communal juice is a cute tradition that carries a sense of unity.

With the aim of uncovering the lovely habits of the ethnic groups, "Pwint Thit Shwe" Kachin traditional khao juice is produced and sold not only in the domestic market but also abroad so that it can be consumed at a reasonable price according to the taste of khao juice anywhere.

We are using Raw Material of Local,

1. Sticky rice
2. Yeast
3. Sugar
4. Purified water

Since it is produced using above raw, it is not only healthy, but it is also proudly sold in the foreign market as a local traditional food product of the country.

Pwint Thit Shwe, Kachin Traditional Khao Juice is a product that already has a good reputation among distributors and consumers because it can produce high quality products at a reasonable price based on market needs.

Pwint Thit Shwe, Rice Alcohol

Japanese people drink sake (Sake), Koreans not only preserve traditional heritage by drinking Sunju (Soju), but also produce and sell it for world-recognized consumption.

Pwint Thit Shwe (Rice Liquor) is a traditional refined alcohol of endangered Myanmar.

We are using Raw Material of Local,

1. Rice
2. Yeast
3. Purified Water

Since it is produced using above raws, it is not only healthy, but it is also proudly sold in the foreign market as a local traditional food product of the country.

Other liquors are brewed according to market needs and distributed and sold in the market even before the specified period is reached, but Pwint Thit Shwe (Rice liquor) is produced and sold at a reasonable price to meet the standards and quality according to the guidance policies established by the Ministry of Consumer and Health.

(Pregnant women and minors should not drink it)

SHWE (Coconut Milk)

"Shwe Myo Chit Company's distribution and sale" Shwe Coconut Milk is a ready-to-eat high-quality coconut milk imported and sold from Thailand under the OEM system. Not only has it received from the FDA in Thailand, but it is also a food product that has been approved by the Myanmar Food and Drug Administration FDA.

Only one type of coconut is squeezed with modern equipment, and the coconut milk can be distilled and distributed and sold in order to consume it according to its natural taste. It is popular in the local market and is popular in hotels, restaurants and fast food markets.

Agriculture Production Projects of Shwe Myo Chit Company Limited

The agricultural sector of Shwe Myo Chit Company is working on the other hand to get foreign income for the country by transporting raw/finished products produced from palm trees/coconuts and raw/finished products produced from plum/plum seeds not only domestically but also internationally.

Products available from plums and plum seeds

If plums become available, efforts are being made to export raw plums to China as animal food (especially goats), and the Chinese market has already become available. Plums can be used in the food industry. They can even produce high-powered and high-grade charcoal, which is our main product, by breaking down plums and making them very useful.

Inner seeds of plums are used as the main medicinal product in traditional Chinese medicine and are exported to China.

"SHWE"
(PLUM SEED CHARCOAL)

Shwe Thailand Company Limited has obtained the right to legally import and sell sole proprietors to Thailand for the "Shwe" (Plum Seed Charcoal) product of Myanmar that produced by Shwe Myo Chit Company Limited from Myanmar.

"Shwe" (Plum Seed Charcoal) By being able to use wood substitute fuel, the country's valuable forest resources can also be preserved sustainably.

As an economical clean energy, Plum seed charcoal has many features.

- Renewable feature: Plum seed charcoal is made from renewable agricultural waste (plum seeds). It helps reduce agricultural waste.
- Porous structure: Its surface has millions of tiny voids.
- High carbon content: It is made of plum seed that is rich in carbon.
- High calorific value: Plum seed has high cellulose content and moderate density. The ash content of Plum seed charcoal is relatively low. Therefore, plum seed has a higher calorific value.
- Stability: The high carbon content and low volatility of Plum seed charcoal give it high stability.

COCONUT
EXPORTS & IMPORTS

We are one of the coconut-based products supplier and exporter from Thailand, Myanmar and Other Asian country.
